apoptotic programs (By similarity). May play an essential role in postimplantation development, probably in some aspect of cell specification and/or differentiation.

SUBUNIT: Heterodimer of a C-terminal fragment N(TM) and a N-terminal fragment N(EC) which are probably linked by disulfide RBP-J kappa and activates genes of the enhancer of split locus. Affects the implementation of differentiation, proliferation and

SUBCELLULAR LOCATION: Type I membrane protein. Following

proteolytical processing NICD is translocated to the nucleus.
ALTERNATIVE PRODUCTS: 2 isoforms; 1 (shown here) and 2; may be produced by alternative splicing.
TISSUE SPECIFICITY: Expressed in the brain, liver, kidney, neuroepithelia, somites, optic vesicles and branchial arches, but

-1. DEVELOPMENTAL STAGE: Expressed in the embryonic ventricular zone, the postnatal ependymal cells, and the choroid plexus throughout end postnatal development.

-1. PTM: Synthesized in the endoplasmic reticulum as an inactive form which is proteolytically cleaved by a furin-like convertase in the trans-Golgi network before it reaches the plasma membrane to yield an active, ligand-accessible form. Cleavage results in a C-terminal fragment N(TM) and a N-terminal fragment N(EC). Following ligand bliding, it is cleaved by TNF-alpha converting enzyme (TACE) to yield a membrane-associated intermediate fragment called notch extracellular truncation (NEXT). This fragment is then cleaved by presentlin dependent gamma-secretase to release a notch-derived peptide containing the intracellular domain (NICD) from the membrane.

ಥ

PTM: Phosphorylated.

-i- SIMILARITY: BELONGS TO THE NOTCH FAMILY.
-i- SIMILARITY: CONTAINS 34.5 BGF-LIKE DOMAINS.
-i- SIMILARITY: CONTAINS 2 LIN/NOTCH REPEATS.
-i- SIMILARITY: CONTAINS 6 ANK REPEATS.

SUBCELLULAR LOCATION: Secreted; extracellular matrix.
ALTERNATIVE PRODUCTS: At least 4 isoforms; V0 (shown here), V1, V2 and V3; are produced by alternative splicing.
TISSUE SPECIFICITY: Cerebral white matter. V0 and V1 are expressed in the central nervous system, and in a number of mesenchymal and epithelial tissues; the major isoform v2 is restricted to the

May take part in the regulation of cell motility, growth and differentiation. Binds.

-!- FUNCTION: May play a role in intercellular signaling and in connecting cells with the extracellular matrix. May take part in the requiation of cell motility, growth and differentiation. Binds hyaluronic acid.
                                                                                                                                                                                                                                                                                                                                                              ALTERNATIVE PRODUCTS: At least 5 isoforms; V0 (shown here), V1, ALTERNATIVE PRODUCTS: At least 5 isoforms; V0 (shown here), V1, V2, V3 and Vint; are produced by alternative splicing.

TISSUE SPECIFICITY: Cerebral white matter. V0 and V1 is expressed in normal brain, gliomas, medulloblastomas, schwannomas, neurofibromas, and menningiomas; V2 is restricted to normal brain and gliomas; v3 is found in all these tissues except
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 medulloblascoms.
--- DEVELOPMENTAL STAGE: Disappears after the cartilage development.

mouses.;

Mech. Dev. 112:157-160(2002).

1- FUNCTION: Receptor that may have an important role in cell/cell signaling during nervous system formation.

1- SUBCELLUIAR LOCATION: Integral membrane protein.

1- SUBCELLUIAR LOCATION: Integral membrane protein.

1- DEVELOPMENTAL STAGE: Predominantly expressed in the developing CNS, the emerging dorsal root ganglia and cranial ganglia. In the CNS, expression is uniform along the rostrocaudal axis. During gastrulation, it is expressed within the anterior neural ectoderm. At ElO, expression is strong in the ventricular zones (WZ) in all servors of the brain, and lower in the marginal zones (WZ) in all servors of the brain, and lower in the marginal zones (WZ) in all servors in VZ, lower in MZ, except in telecephalic MZ where it is strong in VZ, lower in MZ, except in telecephalic MZ where it is strong in VZ, lower in MZ, except in the cerebral hemispheres, and to a lesser extent in the tectum and cerebral hemispheres, and to a lesser extent in the fetal lungs, kidney and epithelia. In the newborn and postnatal stages, expression remains restricted to the VZ as well as in migrating and postnajatory cells throughout the brain.

1- SIMILARITY: CONTAINS 9 CADHERIN DOMAINS.

1- SIMILARITY: CONTAINS 1 LAMININ G-LIKE DOMAINS.

1- SIMILARITY: CONTAINS 1 LAMININ EGF-LIKE DOMAIN.

2- SIMILARITY: CONTAINS 1 GAP DOMAIN.

2- SIMILARITY: CONTAINS 1 GAP DOMAIN.

**A zebrafish homologue of the Drosophila neurogenic gene Notch and

**Is pattern of transcription during early embryogenesis.";

**Is pattern of transcription during early embryogenesis.";

**Mech. Dev. 43:87-100(1993).

**DEVELOPMENT MAY BE INVOLVED IN THE FORMATION OF THE EMBRYO DEVELOPMENT. MAY BE INVOLVED IN THE FORMATION OF THE NEURLY PLATE, NOTOCHORD AND BRAIN VESICLES.

**IS STAGES.** During gastrulation is differentially expressed, accumulating predominantly in the prechordal mesoderm and notochord. At the end of gastrulation, expressed along the anterior-posterior axis including the developing neural plate and differentiating mesoderm. Also present in the developing brain and head regions.

**IS STMILMARITY: CONTAINS 3 LIN/NOTCH REPEATS.**

**IS IMILMARITY: CONTAINS 6 ENF. REPEATS.**

**IS IMILMARITY: CONTAINS 6 ANK REPEATS.**

                                                                                             15 REQUEED FOR THE CORRECT SEPARATION OF NEGRAL AND BEIDERMALL
CELL LINEAGES.

1- SUBCELLULAR LOCATION: Type I membrane protein.

1- TISSUE SPECIFICITY: DEPECTED IN ALL AREAS WITH NEUROGENIC
ABILITIES, FOR EXAMPLE THE NEUROGENIC ECTODERM AND THE PRINORDIA
OF THE SENSE ORGANS. LATER EXPRESSION IS RESTRICTED TO THOSE CELLS
THAT HAVE ADOPTED A NEURAL FATE.

1- DEVELOPMENTAL STAGE: EXPRESSED BOTH MATERNALLY AND ZYGOTICALLY.
EXPRESSION IS HIGHEST EARLY IN EMBRYONIC DEVELOPMENT (STAGE 5) AND
REDUCES TO A LOW LEVEL DURING LARVAL STAGES.

1- TED INNER PART OF EMBRYO IS ONE OF THE FIRST STEEPS OF CNS
THE INNER PART OF EMBRYO IS ONE OF THE FIRST STEEPS OF CNS
DEVELOPMENT IN INSECTS, THIS PROCESS IS UNDER CONTROL OF THE
NEUROGENIC GENES.

1- MISCELLANGOUS: NOTCH AND SERRATE MAY INTERACT AT THE PROTEIN MAY
COMPETE FOR BINDING WITH THE NOTCH PROTEIN.

1- SIMILARITY: CONTAINS 9 EGF-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation-the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
                                    Drosophila melanogaster.";
Development 110:1905-914(1990).
-i- FUNCTION: ESSENTIAL FOR PROPER DIFFERENTIATION OF ECTODERM. DL
IS REQUIRED FOR THE CORRECT SEPARATION OF NEURAL AND EPIDERMAL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ke domain; Glycoprotein; Signal.
